# Submit #788336: code-projects Simple IT Discussion V1.0 SQL injection

Title	code-projects Simple IT Discussion V1.0 SQL injection
Description	During the security review of "Simple IT Discussion Forum", I discovered a critical SQL injection vulnerability in the "question-function.php" file. This vulnerability stems from insufficient user input validation of the "content" parameter allowing attackers to inject malicious SQL queries. Therefore, attackers can gain unauthorized access to databases, modify or delete data, and access sensitive information. Immediate remedial measures are needed to ensure system security and protect data integrity.
