Submit #796281: code-projects Vehicle Showroom Management System V1.0 SQL injection

Title code-projects Vehicle Showroom Management System V1.0 SQL injection

Description During the security review of "Vehicle Showroom Management System" I discovered a critical SQL injection vulnerability in the "vuln/RegisterCustomerFunction.php" file. This vulnerability stems from insufficient user input validation of the "BRANCH_ID" parameter, allowing attackers to inject malicious SQL queries. Therefore, attackers can gain unauthorized access to databases, modify or delete data, and access sensitive information. Immediate remedial measures are needed to ensure system security and protect data integrity.
