Summary

A vulnerability marked as **critical** has been reported in [code-projects Accounting System 1.0](#). Impacted is an unknown function of the file `/viewin_costumer.php` of the component *Parameter Handler*. Performing a manipulation of the argument `cos_id` results in sql injection. This vulnerability was named **CVE-2026-5150**. The attack may be initiated remotely. In addition, an exploit is available.

Details

A vulnerability was found in [code-projects Accounting System 1.0](#). It has been classified as **critical**. This affects an unknown code of the file `/viewin_costumer.php` of the component *Parameter Handler*. The manipulation of the argument `cos_id` with an unknown input leads to a sql injection vulnerability. CWE is classifying the issue as **CWE-89**. The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. This is going to have an impact on confidentiality, integrity, and availability.

It is possible to read the advisory at [github.com](#). This vulnerability is uniquely identified as **CVE-2026-5150**. The exploitability is told to be easy. It is possible to initiate the attack remotely. No form of authentication is needed for exploitation. Technical details and a public exploit are known. The attack technique deployed by this issue is **T1505** according to MITRE ATT&CK.

The exploit is shared for download at [github.com](#). It is declared as proof-of-concept. By approaching the search of `inurl:viewin_costumer.php` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

See [VDB-354203](#), [VDB-354206](#), [VDB-354207](#) and [VDB-354208](#) for similar entries.
