Summary

A vulnerability was found in [Dromara lamp-cloud up to 5.8.1](#) and classified as **critical**. This issue affects the function `pageUser` of the file `/defUser/pageUser` of the component `DefUserController`. Executing a manipulation can lead to improper authorization. This vulnerability is tracked as [CVE-2026-5529](#). The attack can be launched remotely. Moreover, an exploit is present. The project was informed of the problem early through an issue report but has not responded yet.

Details

A vulnerability was found in [Dromara lamp-cloud up to 5.8.1](#). It has been declared as problematic. This vulnerability affects the function `pageUser` of the file `/defUser/pageUser` of the component `DefUserController`. The manipulation with an unknown input leads to a improper authorization vulnerability. The CWE definition for the vulnerability is [CWE-285](#). The product does not perform or incorrectly performs an authorization check when an actor attempts to access a resource or perform an action. As an impact it is known to affect confidentiality.

The advisory is available at [github.com](#). This vulnerability was named [CVE-2026-5529](#). The exploitation appears to be easy. The attack can be initiated remotely. Technical details and also a public exploit are known. This vulnerability is assigned to [T1548.002](#) by the MITRE ATT&CK project.

It is possible to download the exploit at [github.com](#). It is declared as proof-of-concept. The project was informed of the problem early through an issue report but has not responded yet.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

The entries [VDB-195757](#) and [VDB-256899](#) are pretty similar.
