## Summary

A vulnerability categorized as **critical** has been discovered in [Tenda AC10 16.03.10.10\\_multi\\_TDE01](#). This vulnerability affects the function `fromSysToolChangePwd` of the file `/bin/httpd`. The manipulation results in stack-based overflow. This vulnerability is cataloged as [CVE-2026-5550](#). The attack may be launched remotely. There is no exploit available. Multiple endpoints might be affected.

## Details

A vulnerability, which was classified as critical, was found in [Tenda AC10 16.03.10.10\\_multi\\_TDE01](#). Affected is the function `fromSysToolChangePwd` of the file `/bin/httpd`. The manipulation with an unknown input leads to a stack-based overflow vulnerability. CWE is classifying the issue as [CWE-121](#). A stack-based buffer overflow condition is a condition where the buffer being overwritten is allocated on the stack (i.e., is a local variable or, rarely, a parameter to a function). This is going to have an impact on confidentiality, integrity, and availability.

The advisory is available at [github.com](#). This vulnerability is traded as [CVE-2026-5550](#). The exploitability is told to be easy. It is possible to launch the attack remotely. Technical details are known, but there is no available exploit. The structure of the vulnerability defines a possible price range of USD \$0-\$5k at the moment (estimation calculated on 04/05/2026).

Multiple endpoints might be affected.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

The vulnerability is also documented in the vulnerability database at EUVD ([EUVD-2026-19048](#)). The entries [VDB-304982](#), [VDB-305656](#), [VDB-305657](#) and [VDB-305726](#) are related to this item.
