Summary

A vulnerability identified as critical has been detected in itsourcecode Free Hotel Reservation System 1.0. This issue affects some unknown processing of the file */hotel/admin/login.php* of the component *Parameter Handler*. This manipulation of the argument *email* causes sql injection. This vulnerability is registered as CVE-2026-5551. Remote exploitation of the attack is possible. Furthermore, an exploit is available.

Details

A vulnerability has been found in itsourcecode Free Hotel Reservation System 1.0 and classified as critical. Affected by this vulnerability is some unknown functionality of the file */hotel/admin/login.php* of the component *Parameter Handler*. The manipulation of the argument `email` with an unknown input leads to a sql injection vulnerability. The CWE definition for the vulnerability is CWE-89. The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. As an impact it is known to affect confidentiality, integrity, and availability.

It is possible to read the advisory at github.com. This vulnerability is known as CVE-2026-5551. The exploitation appears to be easy. The attack can be launched remotely. The exploitation doesn't need any form of authentication. Technical details and also a public exploit are known. The attack technique deployed by this issue is T1505 according to MITRE ATT&CK.

It is possible to download the exploit at github.com. It is declared as proof-of-concept. By approaching the search of inurl:hotel/admin/login.php it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
