## Summary

A vulnerability described as **critical** has been identified in [SourceCodester/jkev Record Management System 1.0](#). This affects an unknown part of the file `save_emp.php` of the component *Add Employee Page*. Such manipulation leads to unrestricted upload. This vulnerability is documented as [CVE-2026-5576](#). The attack can be executed remotely. Additionally, an exploit exists.

## Details

A vulnerability was found in [SourceCodester/jkev Record Management System 1.0](#). It has been rated as **critical**. Affected by this issue is an unknown code block of the file `save_emp.php` of the component *Add Employee Page*. The manipulation with an unknown input leads to a unrestricted upload vulnerability. Using CWE to declare the problem leads to [CWE-434](#). The product allows the attacker to upload or transfer files of dangerous types that can be automatically processed within the product's environment. Impacted is confidentiality, integrity, and availability.

The advisory is available at [github.com](#). This vulnerability is handled as [CVE-2026-5576](#). The exploitation is known to be easy. The attack may be launched remotely. The exploitation needs additional levels of successful authentication. Technical details as well as a public exploit are known. This vulnerability is assigned to [T1608.002](#) by the MITRE ATT&CK project.

The exploit is available at [github.com](#). It is declared as proof-of-concept. By approaching the search of `inurl:save_emp.php` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

Entry connected to this vulnerability is available at [VDB-274710](#).
