Summary

A vulnerability classified as **critical** has been found in **Belkin F9K1015 1.00.10**. The impacted element is the function `formSetFirewall` of the file `/goform/formSetFirewall`. This manipulation of the argument `webpage` causes stack-based overflow. This vulnerability is tracked as **CVE-2026-5629**. The attack is possible to be carried out remotely. Moreover, an exploit is present. The vendor was contacted early about this disclosure but did not respond in any way.

Details

A vulnerability was found in **Belkin F9K1015 1.00.10**. It has been declared as critical. Affected by this vulnerability is the function `formSetFirewall` of the file `/goform/formSetFirewall`. The manipulation of the argument `webpage` with an unknown input leads to a stack-based overflow vulnerability. The CWE definition for the vulnerability is **CWE-121**. A stack-based buffer overflow condition is a condition where the buffer being overwritten is allocated on the stack (i.e., is a local variable or, rarely, a parameter to a function). As an impact it is known to affect confidentiality, integrity, and availability.

The advisory is shared at github.com. This vulnerability is known as **CVE-2026-5629**. The exploitation appears to be easy. The attack can be launched remotely. Technical details and also a public exploit are known.

It is possible to download the exploit at github.com. It is declared as proof-of-concept. The vendor was contacted early about this disclosure but did not respond in any way.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

The entries [VDB-353965](#), [VDB-353966](#), [VDB-353967](#) and [VDB-355399](#) are pretty similar.
