## Summary

A vulnerability categorized as **critical** has been discovered in [HerikLyma CPPWebFramework up to 3.1](#). Impacted is an unknown function. Executing a manipulation can lead to path traversal. This vulnerability is handled as [CVE-2026-5638](#). The attack can be executed remotely. Additionally, an exploit exists. The project was informed of the problem early through an issue report but has not responded yet.

## Details

A vulnerability was found in [HerikLyma CPPWebFramework up to 3.1](#). It has been declared as critical. This vulnerability affects an unknown functionality. The manipulation with an unknown input leads to a path traversal vulnerability. The CWE definition for the vulnerability is [CWE-22](#). The product uses external input to construct a pathname that is intended to identify a file or directory that is located underneath a restricted parent directory, but the product does not properly neutralize special elements within the pathname that can cause the pathname to resolve to a location that is outside of the restricted directory. As an impact it is known to affect confidentiality.

The weakness was released by Matan Sandori as [40](#). The advisory is available at [github.com](#). This vulnerability was named [CVE-2026-5638](#). The exploitation appears to be easy. The attack can be initiated remotely. No form of authentication is required for a successful exploitation. Technical details are unknown but a public exploit is available. This vulnerability is assigned to [T1006](#) by the MITRE ATT&CK project.

It is possible to download the exploit at [github.com](#). It is declared as proof-of-concept. The project was informed of the problem early through an issue report but has not responded yet.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
