Summary

A vulnerability identified as critical has been detected in PHPGurukul Online Shopping Portal Project 2.1. The affected element is an unknown function of the file */admin/update-image3.php* of the component *Parameter Handler*. The manipulation of the argument *filename* leads to sql injection. This vulnerability is uniquely identified as CVE-2026-5639. The attack is possible to be carried out remotely. Moreover, an exploit is present.

Details

A vulnerability was found in PHPGurukul Online Shopping Portal Project 2.1. It has been rated as critical. This issue affects some unknown functionality of the file */admin/update-image3.php* of the component *Parameter Handler*. The manipulation of the argument `filename` with an unknown input leads to a sql injection vulnerability. Using CWE to declare the problem leads to CWE-89. The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. Impacted is confidentiality, integrity, and availability.

It is possible to read the advisory at github.com. The identification of this vulnerability is CVE-2026-5639. The exploitation is known to be easy. The attack may be initiated remotely. Technical details as well as a public exploit are known. The attack technique deployed by this issue is T1505 according to MITRE ATT&CK.

The exploit is available at github.com. It is declared as proof-of-concept. By approaching the search of inurl:admin/update-image3.php it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
