Summary

A vulnerability was found in [code-projects Online Application System for Admission 1.0](#). It has been declared as **critical**. The affected element is an unknown function of the file `/enrollment/database/oas.sql`. Executing a manipulation can lead to sensitive information. This vulnerability appears as [CVE-2026-5650](#). The attack may be performed from remote. In addition, an exploit is available.

Details

A vulnerability classified as critical was found in [code-projects Online Application System for Admission 1.0](#). This vulnerability affects some unknown processing of the file `/enrollment/database/oas.sql`. The manipulation with an unknown input leads to a sensitive information vulnerability. The CWE definition for the vulnerability is [CWE-922](#). The product stores sensitive information without properly limiting read or write access by unauthorized actors. As an impact it is known to affect confidentiality.

The advisory is available at [github.com](#). This vulnerability was named [CVE-2026-5650](#). The exploitation appears to be easy. The attack can be initiated remotely. No form of authentication is required for a successful exploitation. Technical details and also a public exploit are known. This vulnerability is assigned to [T1592](#) by the MITRE ATT&CK project.

It is possible to download the exploit at [github.com](#). It is declared as proof-of-concept. By approaching the search of `inurl:enrollment/database/oas.sql` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

See [VDB-344873](#) and [VDB-355437](#) for similar entries.
