Summary

A vulnerability marked as **critical** has been reported in [Totolink A7100RU 7.4cu.2313_b20191024](#). The affected element is the function `setMiniuiHomeInfoShow` of the file `/cgi-bin/cstecgi.cgi` of the component *CGI Handler*. The manipulation of the argument `lan_info` leads to os command injection. This vulnerability is traded as [CVE-2026-5995](#). It is possible to initiate the attack remotely. Furthermore, there is an exploit available.

Details

A vulnerability was found in [Totolink A7100RU 7.4cu.2313_b20191024](#) and classified as critical. This issue affects the function `setMiniuiHomeInfoShow` of the file `/cgi-bin/cstecgi.cgi` of the component *CGI Handler*. The manipulation of the argument `lan_info` with an unknown input leads to a os command injection vulnerability. Using CWE to declare the problem leads to [CWE-78](#). The product constructs all or part of an OS command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended OS command when it is sent to a downstream component. Impacted is confidentiality, integrity, and availability.

The advisory is shared at [github.com](#). The identification of this vulnerability is [CVE-2026-5995](#). The exploitation is known to be easy. The attack may be initiated remotely. No form of authentication is needed for a successful exploitation. Technical details as well as a public exploit are known. MITRE ATT&CK project uses the attack technique [T1202](#) for this issue.

The exploit is available at [github.com](#). It is declared as proof-of-concept.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
