Summary

A vulnerability described as **critical** has been identified in [itsourcecode Construction Management System 1.0](#). This affects an unknown function of the file `/del1.php`. Such manipulation of the argument `toolname` leads to sql injection. This vulnerability is documented as [CVE-2026-6030](#). The attack can be executed remotely. Additionally, an exploit exists.

Details

A vulnerability was found in [itsourcecode Construction Management System 1.0](#). It has been rated as critical. Affected by this issue is an unknown code block of the file `/del1.php`. The manipulation of the argument `toolname` with an unknown input leads to a sql injection vulnerability. Using CWE to declare the problem leads to [CWE-89](#). The product constructs all or part of an SQL command using externally-influenced input from an upstream component, but it does not neutralize or incorrectly neutralizes special elements that could modify the intended SQL command when it is sent to a downstream component. Impacted is confidentiality, integrity, and availability.

The advisory is available at [github.com](#). This vulnerability is handled as [CVE-2026-6030](#). The exploitation is known to be easy. The attack may be launched remotely. Technical details as well as a public exploit are known. This vulnerability is assigned to **T1505** by the MITRE ATT&CK project.

The exploit is available at [github.com](#). It is declared as proof-of-concept. By approaching the search of `inurl:del1.php` it is possible to find vulnerable targets with Google Hacking.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.

Entries connected to this vulnerability are available at [VDB-284355](#), [VDB-284356](#), [VDB-355410](#) and [VDB-355484](#).
