Summary

A vulnerability described as **critical** has been identified in [Tenda F451 1.0.0.7_cn_svn7958](#). This issue affects the function `fromqossetting` of the file `/goform/qossetting`. Executing a manipulation of the argument `qos` can lead to stack-based overflow. This vulnerability appears as [CVE-2026-6134](#). The attack may be performed from remote. In addition, an exploit is available.

Details

A vulnerability has been found in [Tenda F451 1.0.0.7_cn_svn7958](#) and classified as critical. This vulnerability affects the function `fromqossetting` of the file `/goform/qossetting`. The manipulation of the argument `qos` with an unknown input leads to a stack-based overflow vulnerability. The CWE definition for the vulnerability is [CWE-121](#). A stack-based buffer overflow condition is a condition where the buffer being overwritten is allocated on the stack (i.e., is a local variable or, rarely, a parameter to a function). As an impact it is known to affect confidentiality, integrity, and availability.

The advisory is available at [github.com](#). This vulnerability was named [CVE-2026-6134](#). The exploitation appears to be easy. The attack can be initiated remotely. Technical details and also a public exploit are known.

It is possible to download the exploit at [github.com](#). It is declared as proof-of-concept.

There is no information about possible countermeasures known. It may be suggested to replace the affected object with an alternative product.
