# Submit #766933: Tenda F453 v1.0.0.3 Stack-based Buffer Overflow

<b>Title</b>	Tenda F453 v1.0.0.3 Stack-based Buffer Overflow
<b>Description</b>	A vulnerability was found in Tenda F453 v1.0.0.3. Affected by this vulnerability is the function fromSetCfm of the file /goform/setcfm of the component httpd. The manipulation of the argument funcname and funcpara1 with an unknown input leads to a buffer overflow vulnerability. In fromSetCfm function, it reads in a user-provided parameter funcname and funcpara1. If the value of funcpara1 is save_list_data, the variable v14 will be passed to the sub_3A874 function without any length check. And finally in sub_3A874 function, the variable of a1 is passed to sprintf, which may overflow the stack-based buffer s. As a result, by requesting the page, an attacker can easily execute a denial of service attack or remote code execution.
