Submit #767222: Tenda F453 v1.0.0.3 Stack-based Buffer Overflow

Title	Tenda F453 v1.0.0.3 Stack-based Buffer Overflow
Description	A vulnerability was found in Tenda F453 v1.0.0.3. Affected by this vulnerability is the function formexeCommand of the file /golorm/exeCommand of the component httpd. The manipulation of the argument cmdinput with an unknown input leads to a buffer overflow vulnerability. In formexeCommand function, it reads in a user-provided parameter cmdinput. And the variable src is passed to the strcpy function without any length check, which may overflow the stack-based buffer s. As a result, by requesting the page, an attacker can easily execute a denial of service attack or remote code execution.
