Submit #769462: Tenda i12 V1.0.0.6(2204) Buffer Overflow

Title	Tenda i12 V1.0.0.6(2204) Buffer Overflow
Description	We found an overflow vulnerability in httpd ; in formexeCommand function it reads in a user-provided parameter cmdinput and the variable Var is passed to the vos_stncpy function without any length check, which may overflow the stack-based buffers. As a result, by requesting the page, an attacker can easily execute a denial of service attack or remote code execution.
