Submit #769464: Tenda i12 V1.0.0.6(2204) Buffer Overflow

Title	Tenda i12 V1.0.0.6(2204) Buffer Overflow
Description	We found an overflow vulnerability in httpd ; in formwriSSIDget function,it reads in a user-provided parameter wl_radioand index, if the value of wl_radio is not 0, the variable v22 will be passed to the sprintf function without any length check, which may overflow the stack-based buffer s__2. As a result, by requesting the page, an attacker can easily execute a denial of service attack or remote code execution.
