Secure Remote File Access Without VPN Friction

WebDrive maps remote and cloud storage as a secure local drive, giving users seamless access while IT maintains policy control, visibility, and centralized governance.

Why Organizations Choose WebDrive

VPN Friction Reduces Productivity

Traditional VPN-based file access slows users and creates workflow interruptions.

Consumer Sync Tools Introduce Risk

Unmanaged file-sharing applications create data sprawl and shadow IT exposure.

Lack of Visibility into Remote Access

IT teams struggle to monitor file movement across distributed teams and cloud storage.

Security Policies Are Circumvented

Complex access workflows lead users to bypass controls unintentionally.

The Transparent File Access Client Built for IT

Designed with IT managers in mind, WebDrive delivers transparent, secure access to cloud and on-prem storage. Pre-configure connections, embed registration codes, and roll out across your organization with automated installs. WebDrive standardizes file access with a familiar drive letter interface-no user training required.

Ideal Use Cases for WebDrive

Secure remote file access for distributed teams

Controlled access to cloud storage

Enabling contractors without exposing networks

Replacing consumer file-sharing tools

Supporting hybrid and remote work environments

How WebDrive Solves It

VPN Bottlenecks

WebDrive eliminates VPN dependency by mapping storage directly as local drives for frictionless access.

Shadow IT Risk

Centralized control prevents unmanaged tools; IT pre-configures approved connections only.

Remote Access Visibility Gaps

Enterprise logging and audit-ready visibility track all file activity across users and storage.

Manual File Sharing Workarounds

Seamless mapped-drive experience eliminates need for risky manual sharing methods.

Core WebDrive Capabilities

Secure Drive Mapping

Centralized Deployment & Control

Protocol & Storage Support

Encryption & Secure Authentication

Enterprise Logging & Visibility

Download The WebDrive One Pager

Get a concise overview of how WebDrive enables secure, governed file exchange with enterprise-grade visibility and compliance alignment.

- Segmented, security-first architecture
- Centralized logging and audit visibility
- Fast deployment with flexible integrations

Trusted by 30,000+ organizations worldwide

Deployment Package

- ✓ Planning and Analysis
- ✓ Install and Setup
- ✓ **Outcome Verification** - Validation that the deployment or migration was completed successfully and the environment is functioning as expected (configuration, connectivity, permissions, workflows, etc.).

- ✓ **Outcome Verification Report** - A detailed report documenting the verification process, actions performed, and confirmation that the environment is operating correctly.
- ✓ Basic Training (1 HR Max)
- ✓ Consult and Setup Report
- ✓ Outcome – Verification Report

Migration Package

- ✓ SRT Application Migrations
- ✓ Migrate to/from On-Prem, Cloud, or HA
- ✓ **Outcome Verification** - Validation that the deployment or migration was completed successfully and the environment is functioning as expected (configuration, connectivity, permissions, workflows, etc.).
- ✓ **Outcome Verification Report** - A detailed report documenting the verification process, actions performed, and confirmation that the environment is operating correctly.
- ✓ Admin Training (1 HR Max)
- ✓ Consult and Migration Report
- ✓ Outcome – Verification Report

Checkpoint Package

- ✓ Application Performance Assessment
- ✓ Configuration and Environment Review
- ✓ Best Practices Evaluation
- ✓ Software Upgrade/Maintenance
- ✓ Findings and Remediation Report
- ✓ Optimization Recommendations

Modernize Remote File Access Without Expanding Risk

Deploy secure mapped-drive access to cloud and on-prem storage while maintaining centralized IT control, encrypted connections, and full user visibility.
