Description

SEO Links Interlinking is a powerful WordPress plugin that automates internal link building to improve your site's SEO performance. Connect with Google Search Console to get intelligent link suggestions based on your actual search data and automatically insert relevant internal links into your content.

Key Features:

- **Google Search Console Integration** – Get link suggestions directly from your Google Search Console data
- **Bulk Link Insertion** – Add multiple internal links to your posts and pages with a single click
- **Custom Links Management** – Create and manage custom internal links from the settings page
- **Smart Keyword Matching** – Automatically finds the best anchor text and target URLs based on your content
- **Real-time Link Preview** – See suggested links in the post editor before inserting them
- **Search Console Data Export** – Export your search performance data for analysis
- **Multilanguage Support** – Works with multilingual WordPress sites
- **Credit System** – Start with 10 free credits, purchase more as needed

How It Works:

1. Create a free account at wpseoplugins.org to get your API key
2. Connect your Google Search Console account
3. The plugin analyzes your search data and suggests relevant internal links
4. Click “Add Links” in any post or page to automatically insert optimized internal links
5. Improve your SEO rankings and user experience with strategic interlinking

Why Internal Links Matter:

Internal linking is crucial for SEO because it:

- * Helps search engines understand your site structure
- * Distributes page authority throughout your site
- * Improves user navigation and engagement
- * Increases time on site and reduces bounce rate
- * Boosts rankings for target keywords

Privacy & Security:

All data is handled securely according to our [privacy policy](#) and [terms and conditions](#). Your Google Search Console data is processed securely and never shared with third parties.

Development

For Developers & Contributors

Repository Structure:

- Main plugin file: `sdata.php`
- AJAX handlers: `ajax.php`
- Utility functions: `utils.php`
- Views: `view/` directory
- Assets: `css/`, `js/`, `images/` directories

Key Functions:

- `seoli_folder_contents()` – Main function for adding links to posts
- `seoli_process_next_post_in_queue()` – Processes posts in bulk operations
- `seoli_log_bulk_activity()` – Logs bulk operation results
- `seoli_replace_regex()` – Regex-based link insertion

Hooks & Filters:

The plugin uses standard WordPress hooks and can be extended with:

- `seoli_before_link_insertion` – Filter before inserting links
- `seoli_after_link_insertion` – Action after links are inserted
- WordPress Cron events for background processing

API Integration:

- Backend API: <https://api.wpseoplugins.org/>
- Authentication via API key stored in WordPress options
- Data format: JSON responses from Google Search Console

Contributing:

We welcome contributions! To contribute:

1. Fork the plugin repository
2. Create a feature branch
3. Make your changes following WordPress coding standards
4. Test thoroughly
5. Submit a pull request

Coding Standards:

- Follow [WordPress PHP Coding Standards](#)
- Use WordPress functions for security (sanitization, validation, nonces)
- Comment complex logic
- Test on multiple WordPress versions

Debugging:

- Enable WordPress debug mode: `define('WP_DEBUG', true);`
- Check Activity Log in Settings page
- Use Debug Logs section for detailed troubleshooting
- External cron endpoint available for testing background operations

Testing:

- Test on WordPress 5.0+ and PHP 7.4+
- Verify with both Classic and Gutenberg editors
- Test bulk operations with various post counts
- Verify multilanguage compatibility if applicable

Security Notes:

- All user input is sanitized and validated
- Nonces are used for all admin actions
- API calls use WordPress HTTP API with SSL verification
- External cron endpoint uses secret token authentication

Performance:

- Bulk operations use WordPress Cron for background processing
- Delay of 0.5 seconds between posts to prevent server overload
- Maximum 50 posts per “Process All” execution
- Activity logs limited to 100 entries to prevent database bloat

For More Information:

- Plugin documentation: Check the [sintesi/](#) directory

- API documentation: Contact support at wpeoplugins.org
- Report bugs: Use the WordPress.org support forum
