Our Products: Networking Software for Windows Sysadmins

Enjoy your network with our innovative network software

Our product line includes the following network software: network monitoring software, network computer inventory software, network management software, network topology discovery software, file searching software, network bandwidth and traffic measurement software, remote administration and network management software, and remote user file & folder access auditing software.

10-Strike provides software for Windows system administrators, sysops, and IT professionals working with networks. Our programs perform the following tasks:

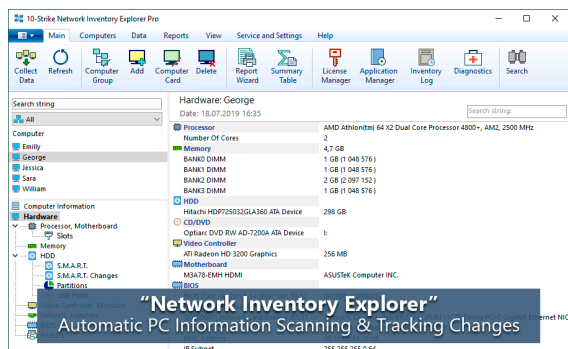

- Network Inventory
- Network Monitoring
- Network Scanning, Topology Discovery, Network Mapping
- Document Search over LAN
- Share User Access Audit

Software for Networks

1. Network Inventory Software

Network Inventory Software

10-Strike Network Inventory Explorer (Pro) 10.8

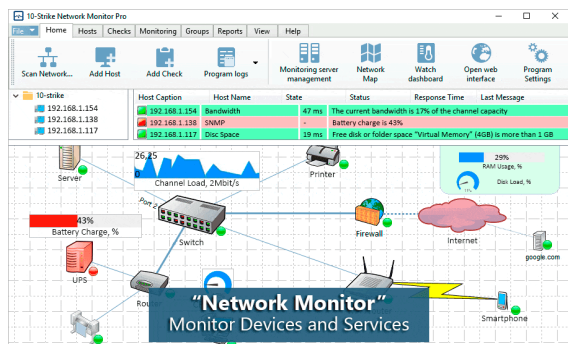

Create, maintain, and track the inventory database of network computers. View hardware and software on network computers remotely, track hardware and software changes. Create reports on the availability of particular programs and number of copies installed on computers. Create reports on versions of operating system, installed updates and bug-fixes, codecs, etc. Plan upgrades, generate reports on computers with insufficient RAM size or disk space. Windows XP/Vista/7/8.1/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

2. Network Monitoring Software

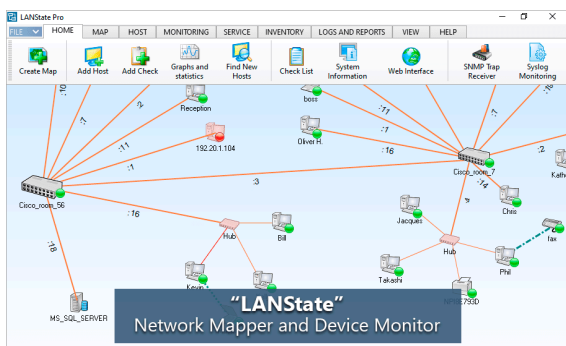

Network Device Monitoring Program

10-Strike Network Monitor 8.3

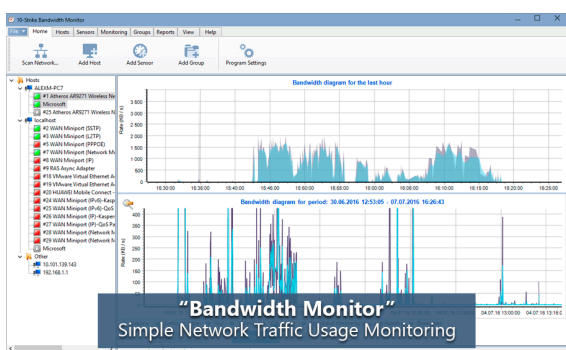

The application allows monitoring computers, servers, printers, UPS, managed switches via SNMP, CCTV equipment via RTSP, and other devices connected to your local area network or the Internet. The application checks hosts and services periodically by sending specific requests to specified services, connecting to ports, and using many other methods. It responds to events in different ways - from displaying a message through rebooting the failed service. Windows XP/Vista/7/8.1/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

Visual Network Monitor and Mapper 10-Strike LANState Pro 10.51 (25 hosts FREE!)

LANState is a visual network mapping and management tool (NMS) with the monitoring functions which allow you to see your network's state at any time. LANState monitors hosts, shares, traffic, and notifies you on various events. It contains many useful tools for administrators and users such as sending messages, shutting down and turning on remote computers, scanning hosts and ports, ping, name lookup, getting information on remote computers, etc. Windows XP/Vista/7/8.1/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

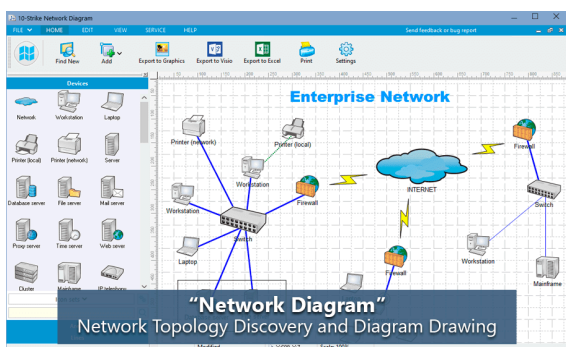

Network Bandwidth and Traffic Monitor 10-Strike Bandwidth Monitor 4.3

Monitor network traffic usage and control bandwidth on your computers, routers, switches, printers, etc. The program can monitor your network in the 24*7 mode and notify you when the bandwidth of the traffic volume is exceeding the configured threshold on hosts. View the network bandwidth diagrams in the real-time. The traffic information can be gathered via SNMP and WMI. In addition, you can install an agent service on remote computers if they do not support WMI or SNMP for some reason. Windows XP/Vista/7/8/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

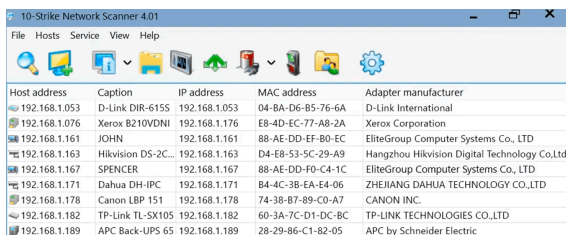

3. Network Scanning And Topology Discovery Software

Network Diagrammer and Mapper 10-Strike Network Diagram 4.1

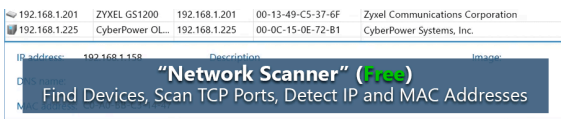

Create network diagrams and maps easily with our new program. 10-Strike Network Diagram scans your network and searches it for network devices. All found computers and switches are placed on a diagram. If your switches support SNMP, connections between devices will be drawn automatically. Just arrange devices with a mouse and save the network diagram to a file, print it, or export to Microsoft Visio. Windows XP/Vista/7/8/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

Free Network and Port Scanner 10-Strike Network Scanner 4.1 (FREEWARE!)

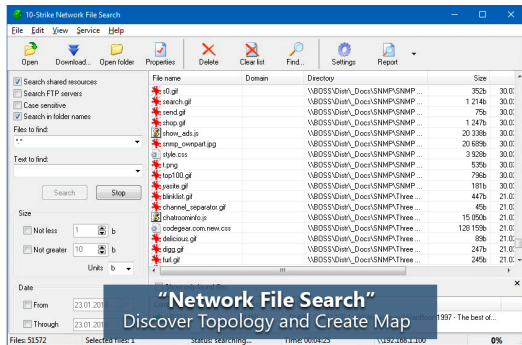

Scan your network for hosts and their addresses with our powerful free port scanner. This mighty lightweight program allows you to quickly scan your LAN, find all connected devices, and detect their addresses (IP, MAC, DNS). You can also scan hosts for opened TCP ports. Windows XP/Vista/7/8/10/11, Server 2003/2008/2012/2016/2019/2022 supported. The program is completely free. Enjoy!

4. Network File Searching Software

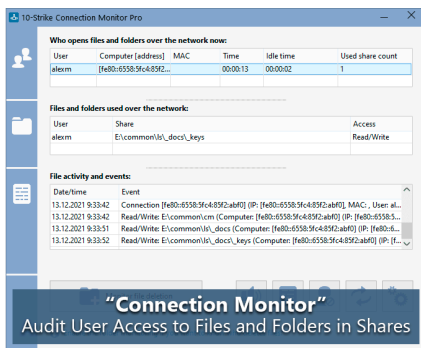

Search Files on Network and FTP servers 10-Strike Network File Search 2.3

Search files on network computers' shares (via the NetBios/SMB protocol) and FTP servers (via the FTP protocol). Enter a search phrase and file masks and find the necessary information. View the search results and open found files directly from the remote computers or copy the files to your hard drive. The program uses fast scanning engine and can generate handy reports on search results. Windows XP/Vista/7/8.1/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

5. Network Share Access Auditing Software

Monitor and Audit User Access to Shared Files and Folders 10-Strike Connection Monitor Pro 6.2

Audit network users' access to your shares and files/folders located on your PC or a file server. Watch who gets into your files in a real-time! The program generates screen, sound, and e-mail notifications on connections, and maintains a log file with information on remote user and computer name, opened files, etc. It also allows you to block or unblock connections to shared resources when necessary. Windows XP/Vista/7/8.1/10/11, Server 2003/2008/2012/2016/2019/2022 supported.

6. Networking Software Bundles

Order all our networking products together in a bundle and save up to 40%!
