File Transfer Solutions to Simplify Your Work

Secure File Transfers with SFTP and FTPS
for Microsoft Windows Operating Systems

Need to reliably transfer files, upload to websites, or download updates? [FTPShell Client](#) will get your work done faster and easier. FTPshell script now supports secure file transfers using SSL/TLS(FTPS) and SSH(SFTP).

Automatically reconnect and resume broken file transfers, compare and synchronize folders between local and remote computers, search for files on a remote computer, zip or unzip files, schedule one-time and recurring tasks, create FTP scripts, and more ...

Simultaneously connect and transfer files from several FTP sites, upload files to multiple servers with a single click, and perform server to server transfers (FXP).

Download Free 30 Day Trial

Download FTPShell Server and FTPShell Client software and try it out free for 30 days.
