# CYBER SECURITY

GeoVision's Cyber Security Policy

## Overview

### Security First at GeoVision

It is the duty and responsibility of GeoVision to notify all users in cases when security concerns have been raised. GeoVision follows detailed practices to ensure the highest standards of network security are met. Whenever plausible security vulnerabilities are discovered, immediate actions are taken by devising necessary upgrades and informing users of the issues.

GeoVision is the first Taiwan tech company to be certified by TAICS (Taiwan Association of Information and Communication Standards), on 2018/11/19, to pass its Level 2 of video surveillance system security standards. As of date, it is the highest level of security any Taiwan tech company has achieved.

The latest security patches and updates are included in the latest software/firmware releases and are available at GeoVision product download page at <https://www.geovision.com.tw/download/product/> provided the product is still supported by GeoVision.

### Contact Information

We encourage users to report any newly discovered vulnerability in our products by contacting our security team at [security@geovision.com.tw](mailto:security@geovision.com.tw)

## GeoVision Vulnerability Policy

### Vulnerability Management Flow

For any newly reported vulnerability in any GeoVision product, a specific team is dispatched to work with research & development and testing departments and ensure the solution is provided without generating any further risk to users.

The main general flow is designed in 4 stages:

- Discover
- Analyze
- Prioritize
- Solution update & follow up

### Vulnerability Classification

A vulnerability when confirmed is classified as non-critical or critical.

The class of critical would suggest high level of risk for users and GeoVision will provide an unscheduled update to fix the vulnerability and documentation to assist users on applying the update.

The Non-critical class vulnerability when not posing any risk to the recommended usage of the product is going to be solved in the normally scheduled firmware release.

### Processing and Reaction Time

Any valid report sent to [security@geovision.com.tw](mailto:security@geovision.com.tw) will be responded within 48 hours and with the possibility of additional questions required for investigation.

## CVE Publication

This website uses cookies so that we can provide you with the best user experience and to deliver advertising messages

and offers on the website that are relevant to you. [To read more about the cookies.](#)

Yes, I Agree

## Disclosure Policy

When we assign a CVE, our goal is to publish CVE details within one week of confirming the vulnerability. CVE details may be published before fixes are available.

Wherever possible, we aim to coordinate disclosure with reporters. Upon request, we are happy to publicly acknowledge reporters on our cybersecurity webpage.

## Security Advisory

Advisory ID	Advisory	CVE ID	Status	Date Published	Article
GV-ERM-2026-03-01	GV-Edge Recording Manager Vulnerability	CVE-2026-4606	Completed	23-Mar-26	<a href="#">Security Advisory</a>
