Support making HeidiSQL better and better

Installation notes

- Windows:
 - HeidiSQL runs fine on Windows 11 x64 (and on Windows 10 x64 with minor issues).
 - Microsoft Visual C++ Redistributable libraries are required for some drivers. Download and install them from [Microsoft](#) if you get errors saying "vcruntime140.dll missing".
 - A preview of v13 can be [downloaded here](#) (updated on 2026-04-21 17:00). Unzip it in your existing HeidiSQL directory, and you can use both version in parallel.
- Linux:
 - For the .deb and QT releases, Ubuntu 24.04 needs [libqt6pas](#) (not in the repos yet):
 - `curl -L -o /tmp/libqt6pas6_6.2.10-1_amd64.deb https://github.com/davidbannon/libqt6pas/releases/download/v6.2.10/libqt6pas6_6.2.10-1_amd64.deb`
 - `sudo apt install /tmp/libqt6pas6_6.2.10-1_amd64.deb`
 - Install package:
 - DEB: `sudo apt install ~/Downloads/debfile`
 - RPM: `sudo yum install Downloads/heidisql...rpm`
 - Settings are stored in a .json file. You may migrate your settings from a Windows registry:

1. click File > "Export settings" (to .txt file) in the Windows version
2. click File > "Import settings" in the Linux version

Latest changes and nightly builds

Latest automatically compiled main executable and installers for HeidiSQL. Just download and overwrite your existing `C:\Program Files\HeidiSQL\heidisql.exe`. Be aware that these builds are not official releases and therefore probably have more bugs, possibly serious ones.

Classic Windows version	v13 Preview, Current Linux and macOS versions
 <i>feat: rename snippet per right-click on query helpers tree</i> Closes #2458 699fde0 : 29 Apr 2026 11:54 v12.17.0.7278 64bit build ≈ Installer ≈	 <i>fix: replace hardcoded Windows directory separator with DirectorySeparator</i> 41615e6 : 29 Apr 2026 12:05 Builds
 <i>fix: wrong path to SynEdit packages after last upgrade to Delphi 12.3</i> 96d92d0 : 27 Apr 2026 20:49 v12.17.0.7277	 <i>feat: rename snippet per right-click on query helpers tree</i> Refs #2458 7171e48 : 29 Apr 2026 11:46
 <i>fix: explicitly set client encoding on PG connection</i> Refs #2465 597da7d : 27 Apr 2026 20:34 v12.17.0.7276 64bit build ≈ Installer ≈	 <i>fix: explicitly set client encoding on PG connection</i> Refs #2465 79c5e4c : 27 Apr 2026 20:35
 <i>fix: MSSQL foreign key lookup to include table schema</i> <i>Use the fully qualified database/schema/table name when resolving OBJECT_ID() for MSSQL foreign key metadata. This prevents SQL Server from implicitly resolving tables under dbo when the table belongs to another schema.</i> <i>Also include the referenced table schema in the foreign key metadata so references to non-dbo tables are preserved correctly.</i> Refs #2462	 <i>fix: MSSQL foreign key lookup to include table schema</i> <i>Use the fully qualified database/schema/table name when resolving OBJECT_ID() for MSSQL foreign key metadata. This prevents SQL Server from implicitly resolving tables under dbo when the table belongs to another schema.</i> <i>Also include the referenced table schema in the foreign key metadata so references to non-dbo tables are preserved correctly.</i> Refs #2462 305534d : 27 Apr 2026 05:11
9fc551d : 26 Apr 2026 18:14 v12.17.0.7275 64bit build ≈ Installer ≈  <i>feature: name columns in SELECT when exporting table with invisible columns</i> Closes #1890	 <i>feature: name columns in SELECT when exporting table with invisible columns</i> Refs #1890 1799b0d : 24 Apr 2026 15:02

55c723f: 24 Apr 2026 15:08 v12.17.0.7274 64bit
build ≈ Installer ≈

 *fix: wrong ENUM column type detection, due to less strict regex*

Closes [#2460](#)

02dfceb: 21 Apr 2026 16:57 v12.17.0.7273 64bit
build ≈ Installer ≈

 *fix: staying on current table by click on "follow foreign key" when the foreign table lives in a different database*

Refs [#2457](#)

f1e4485: 14 Apr 2026 18:58 v12.17.0.7272

 *fix(ui): filter away vertical writing fonts with an @ prefix*

Refs [#2455](#)

de9eeeb: 13 Apr 2026 14:46 v12.17.0.7271

 *Bump version for v12.17 release*

ff2d654: 12 Apr 2026 13:29 v12.17.0.7270 64bit
build ≈ Installer ≈

 *fix: query tab closed by mouse-down on X-button plus mouse-up somewhere else*

Closes [#2274](#)

4bc90fb: 01 Apr 2026 13:39 v12.16.0.7269

 *fix: do not auto-create c:\users\mike\AppData\Roaming\HeidiSQL\ in portable mode, through the default value of asLogFilePath*

This makes DirnameUserAppData and DirnameUserDocuments the only ones being aware of portable mode

Refs [#2450](#)

971d56b: 31 Mar 2026 17:35 v12.16.0.7268 64bit
build ≈ Installer ≈

 *fix: ineffective marking index as invisible or visible, must be done in a separate ALTER TABLE query*

Refs [#1388](#)

 *fix: wrong ENUM column type detection, due to less strict regex*

Refs [#2460](#)

e731fd0: 21 Apr 2026 16:30

 *fix: do not start edit mode in ListTables on right mouse button click*

89ccbac: 15 Apr 2026 13:20

 *fix: staying on current table by click on "follow foreign key" when the foreign table lives in a different database*

Refs [#2457](#)

8643172: 14 Apr 2026 19:01

 *fix(ui): filter away vertical writing fonts with an @ prefix*

Refs [#2455](#)

1814ee9: 13 Apr 2026 14:55

 *Bump version for v12.17 release*

af68d11: 12 Apr 2026 13:35

 *fix(ui): size and margin of buttons on SQL help dialog*

61bc258: 31 Mar 2026 19:32

 *feat: support invisible indexes on MySQL 8.0+ and ignored indexes on MariaDB 10.6+*

Refs [#1388](#)

b3fa484: 31 Mar 2026 19:24

 *refactor: sync from master*

9727d53: 31 Mar 2026 17:40

 *fix: some crashes found in uploaded crash reports*

7bed735: 28 Mar 2026 17:32

 *fix: enable save button after changing default role per combobox*

Refs [#1155](#)

35e43df: 30 Mar 2026 20:22 v12.16.0.7267 64bit
build ≈ Installer ≈

feat: support invisible indexes on MySQL 8.0+ and ignored indexes on MariaDB 10.6+

Refs [#1388](#)

130c26e: 29 Mar 2026 14:24 v12.16.0.7266 64bit
build ≈ Installer ≈

fix: some crashes found in uploaded crash reports

6302851: 28 Mar 2026 17:29 v12.16.0.7265 64bit
build ≈ Installer ≈

refactor: prefer qAutoInc in SQLProvider over dedicated AutoIncName method

87e310e: 28 Mar 2026 16:50 v12.16.0.7264

refactor: revert most of what I did for #2424

This changes the meaning of an empty database setting for a PostgreSQL session:
- old: empty meant "postgres", and "!" meant empty
- new: empty means empty now

Refs [#2424](#) and [#2442](#)

4737689: 26 Mar 2026 20:04 v12.16.0.7263 64bit
build ≈ Installer ≈

fix: support backtick quoted user roles, and some other TValueListEditor related bug fixes

Refs [#1155](#)

f5d054d: 26 Mar 2026 17:15 v12.16.0.7262 64bit
build ≈ Installer ≈

fix: pre-select nothing in BOOL grid cell editor on PostgreSQL

Refs [#1290](#)

4974bab: 25 Mar 2026 19:54 v12.16.0.7261

refactor: simplify some more calls to Query() with the overloaded variants

ca98ff7: 25 Mar 2026 09:38 v12.16.0.7260

fix(ui): remove default "add user" event from add button, turn it into a pure dropdown button

508b139: 28 Mar 2026 16:41

refactor: revert most of what I did for #2424

This changes the meaning of an empty database setting for a PostgreSQL session:
- old: empty meant "postgres", and "!" meant empty
- new: empty means empty now

Refs [#2424](#) and [#2442](#)

3d547fd: 28 Mar 2026 16:40

fix: support backtick quoted user roles, and some other TValueListEditor related bug fixes

Refs [#1155](#)

86ea19c: 28 Mar 2026 16:36

refactor: prefer qAutoInc in SQLProvider over dedicated AutoIncName method

2fbb779: 27 Mar 2026 16:01

fix(ui): apply the same larger tree node height on Linux

Refs [#2344](#)

c770406: 27 Mar 2026 14:56

fix: a few compiler warnings

c6dffe1: 27 Mar 2026 14:39

[Refs #1155](#)

[be1bcf6](#): 25 Mar 2026 09:12 v12.16.0.7259
