## Iarsn — High Quality System Software

Welcome to the home page of **high quality system software**! The applications found here will help you to know more about your Windows system, get detailed information about running processes, CPU and memory usage, network connections, and more. System information is presented in graphical and text forms, and is much more detailed than provided by Windows Task Manager!

Do you want to know what applications load your PC a lot and slow it down? Does your PC have enough operating memory to perform smoothly? Get answers to these and many other questions! Gain the ability of controlling running processes and immediately closing hang-up applications, quickly restarting the system, freeing physical memory, and more!

The more you use these applications, the more you understand that it's a **must have** on your PC! To know the details, follow the "[Products](#)" section, read "[Help and FAQ](#)" or just select desired application below, [download](#), install it and...

Cast some light on your system and PC!

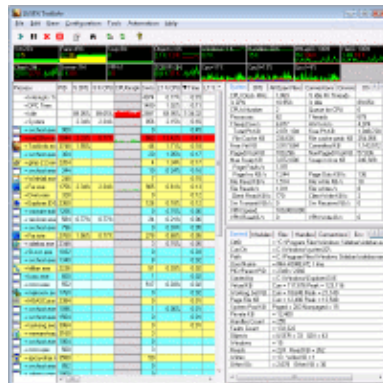

### [TaskInfo](#)

#### NEW Release!!! 01-May-2012

Now TaskInfo is "Free for personal non-commercial use"!

Add Support for Windows 8 and Server 8 Consumer Preview (32 and 64 bit)

Price only [US \\$35](#) !

Combines and improves features of Task Manager and System Information tools. It visually monitors (in text and graphical forms) different types of system information in any Windows system in real time:

- List of all running processes and threads (including system threads), with detailed information about each process: CPU and memory usage, path, all opened files and modules (DLLs), command line, environment variables, opened connections, and more
- List Most of the **Processes** that want to be **invisible**, like **worms, keyloggers, and other spy software**
- Total CPU(s), memory (physical, virtual, cache and swap) usage
- Detailed information about installed CPU(s) and operating system
- Data rates on local disks, network server/client, Dial-Up I/O
- All opened files, kernel drivers, TCP/IP and VPN connections, with details
- And [more](#)!

**TaskInfo** also allows you to:

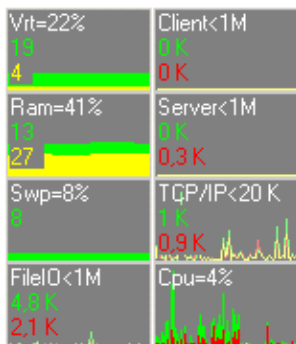

- Copy all information to the clipboard or a text file

- Run/stop processes and shutdown/restart the system
- Use it from command line
- Automatically show different low-resource alerts
- "Free" physical memory on demand
- And [more!](#)

### [AbpMon](#)

**NEW Release!!! 03-Apr-2011**

Freeware!

Resizable and dockable toolbar on your desktop for any Windows system that graphically shows the most popular system information in real time:

- Total CPU(s), memory (physical, virtual, cache and swap) usage
- Data rates on local disks, network server/client, Dial-Up I/O
- And [more!](#)

**AbpMon** also allows you to:

- Shutdown/restart the system
- Automatically show different low-resource alerts
- "Free" physical memory on demand
- And [more!](#)

### [Idea plug-in](#)

Now supports Windows XP and Vista 64-bit Editions

Freeware

Idea crypting driver for [BestCrypt](#) version 6.0b or newer. It's a test of [Jetico's](#) Bestcrypt Developer Kit (BDK). Works in Bestcrypt Environment in any Windows system.

Now supports Windows XP 64-bit Edition. (BestCrypt started to support the Windows version since v.7.20)
