network security solutions for home users, small businesses, and enterprises

Infiltrator
Network Security Scanner

Infiltrator is a FREE easy to use, intuitive network security scanner that can quickly **audit your network computers for vulnerabilities, exploits, and information enumerations**. Infiltrator can reveal and catalog a plethora of information on scanned computers - such as installed software, shares, users, drives, hotfixes, NetBios and SNMP information, open ports and much more! Infiltrator can audit each computer's password and security policies, alerting you when changes should be made to increase security. All results can be generated into sleek, easy to read report by the report generator.

Infiltrator also comes with over 15 powerful network utilities for **footprinting, scanning, enumerating and gaining access** to machines. Included utilities are ping sweep, whois lookups, email tracing, brute force cracking tools, share scanning, network enumerating, and many more!

NetAware
Monitor All File Share Activities

NetAware is a computer monitoring solution that **logs and records all shared file activity** on your computer or network. NetAware can log what files users access and what shares they connect to and disconnect from on your file shares. NetAware is a first of its kind solution that lets you view exactly what users are doing with your shared files, when, and from what computer they are accessing them from. NetAware can be configured to send you an email alert, or display a popup window alert whenever specific file share activity occurs on your computer.

NetAware is powered by an intuitive user interface that features easy log viewing and HTML exporting, as well as a built in share management system that gives you the ability to **lock/unlock shares from access**, create and remove shares, and disconnect connected users at will.
