Caché

High Performance Database

The Database for Applications That Matter

InterSystems Caché[®] is a high-performance database that powers transaction processing applications around the world. It is used for everything from mapping a billion stars in the Milky Way, to processing a billion equity trades in a day, to managing smart energy grids.

Eliminate Complexity and Enable Agile Business Innovation

InterSystems Caché takes the complexity out of application design and deployment. Several high-availability options, including an elegant approach to mirroring, endow your applications with robust reliability – but require less hardware than other vendors' solutions. A flexible, adaptable security model with easy-to-use provisioning capabilities makes it simple to control access to resources.

With the overall simplicity of its architecture, and powerful system management tools, Caché requires fewer database administrators (DBAs) than other databases. In fact, many installations do not require a dedicated DBA at all.
