ISPConfig 3.3.0p2 Released – Security Update

This release fixes several security issues in ISPConfig 3.3.0:

- ✓ An authenticated code injection in language_edit functionality was found by SSD-Disclosure. This requires a valid administrator login.
- ✓ Administrators could grant clients access to the Admin module via the Remote API. While the fact that an admin can do this is not a security issue, it is probably not intended, so we have restricted the available modules in the API now.
- ✓ Authenticated reflected cross-site scripting issue in ISPConfig monitor. This requires a valid admin login. Credits: Marco Nappi
- ✓ Rotated ISPConfig log files are world-readable. These files may contain sensitive information if you activated debug mode in ISPConfig. Credits: Hannes

You can see the full changelog here:

You can report bugs at <https://git.ispconfig.org/ispconfig/ispconfig3/issues>
(<https://git.ispconfig.org/ispconfig/ispconfig3/issues>)

Supported Linux Distributions

- ✓ Debian 10 – 12 (recommended)
- ✓ Ubuntu 24.04 — LTS – 24.04 LTS (recommended)
- ✓ CentOS 7 – 8

Download ISPConfig 3.3.0p2

<https://www.ispconfig.org/downloads/ISPConfig-3.3.0p2.tar.gz> (<https://www.ispconfig.org/downloads/ISPConfig-3.3.0p2.tar.gz>)

The installation instructions for ISPConfig can be found here:

<https://www.ispconfig.org/ispconfig-3/documentation/> (<https://www.ispconfig.org/ispconfig-3/documentation/>)

How can I update to ISPConfig 3.3.0p2?

You can update to ISPConfig 3.3.0p2 by using the `ispconfig_update.sh` command.

Manual update instructions

In case you need to run the update manually without using `ispconfig_update.sh`, use the manual download procedure below:

Run the following commands as root user on your ISPConfig server:

```
cd /tmp
wget https://www.ispconfig.org/downloads/ISPConfig-3.3.0p2.tar.gz
tar xvfz ISPConfig-3.3.0p2.tar.gz
cd ispconfig3_install/install
php -q update.php
```
