# CVE-2026-3324 – Authentication Bypass in Exposed v1 API in Log360

Vulnerability details	
Severity	High
CVE ID	CVE-2026-3324
Affected software versions	Builds between 13000 and 13013
Fixed version	Build 13017
Fixed on	March 10, 2026

## Details

CVE-2026-3324 describes an authentication bypass vulnerability affecting exposed V1 APIs.

## Impact

This vulnerability affected builds from 13000 to 13013. It resulted in authorization checks being bypassed in the exposed V1 APIs of Log360, potentially enabling unauthorized access to data and operations.

## Fix

What's new in Cloud

This issue has been resolved in Log360 build 13017.
