CVE-2026-28756 | Stored XSS vulnerability in Exchange Reporter Plus

Vulnerability Details	
Severity	High
CVE ID	CVE-2026-28756
Affected software versions	Builds 5801 and below
Fixed version	5802
Fixed on	March 19, 2026

Details

CVE-2026-28756 describes a stored XSS vulnerability in the **Permissions based on Distribution Groups** report within the **Reports** module.

Impact

This vulnerability could allow an authenticated attacker with Exchange administrative privileges within the Exchange organization to inject and execute malicious scripts. Successful exploitation may enable the attacker to perform actions within Exchange Reporter Plus based on the privileges of the victim who accesses the affected report.
