Oracle Critical Patch Update Advisory - January 2022

Description

A Critical Patch Update is a collection of patches for multiple security vulnerabilities. These patches address vulnerabilities in Oracle code and in third-party components included in Oracle products. These patches are usually cumulative, but each advisory describes only the security patches added since the previous Critical Patch Update Advisory. Thus, prior Critical Patch Update advisories should be reviewed for information regarding earlier published security patches. Refer to "Critical Patch Updates, Security Alerts and Bulletins" for information about Oracle Security advisories.

Oracle continues to periodically receive reports of attempts to maliciously exploit vulnerabilities for which Oracle has already released security patches. In some instances, it has been reported that attackers have been successful because targeted customers had failed to apply available Oracle patches. Oracle therefore strongly recommends that customers remain on actively-supported versions and apply Critical Patch Update security patches without delay.

This Critical Patch Update contains 497 new security patches across the product families listed below. Please note that an MOS note summarizing the content of this Critical Patch Update and other Oracle Software Security Assurance activities is located at January 2022 Critical Patch Update: Executive Summary and Analysis.

Please note that on December 10, 2021, Oracle released a Security Alert for Apache Log4j vulnerabilities CVE-2021-44228 and CVE-2021-45046. Customers should review the Alert if they have not already done so.

Affected Products and Patch Information

Security vulnerabilities addressed by this Critical Patch Update affect the products listed below. The product area is shown in the Patch Availability Document column.

Please click on the links in the Patch Availability Document column below to access the documentation for patch availability information and installation instructions.

Affected Products and Versions	Patch Availability Document
Agile Product Lifecycle Management Integration Pack for Oracle E-Business Suite, version 3.6	Oracle Supply Chain Products
Application Performance Management, versions 13.4.1.0, 13.5.1.0	Enterprise Manager
Big Data Spatial and Graph, versions prior to 23.1	Database
Enterprise Manager Base Platform, versions 13.4.0.0, 13.5.0.0	Enterprise Manager
Enterprise Manager Ops Center, version 12.4.0.0	Enterprise Manager

Note:

- Vulnerabilities affecting either Oracle Database or Oracle Fusion Middleware may affect Oracle Fusion Applications, so Oracle customers should refer to Oracle Fusion Applications Critical Patch Update Knowledge Document, My Oracle Support Note 1967316.1 for information on patches to be applied to Fusion Application environments.
- Vulnerabilities affecting Oracle Solaris may affect Oracle ZFSSA so Oracle customers should refer to the Oracle and Sun Systems Product Suite Critical Patch Update Knowledge Document, My Oracle Support Note 2160904.1 for information on minimum revisions of security patches required to resolve ZFSSA issues published in Critical Patch Updates and Solaris Third Party bulletins.
- Solaris Third Party Bulletins are used to announce security patches for third party software distributed with Oracle Solaris. Solaris 10 customers should refer to the latest patch-sets which contain critical security patches detailed in Systems Patch Availability Document. Please see Reference Index of CVE IDs and Solaris Patches (My Oracle Support Note 1448883.1) for more information.
- Users running Java SE with a browser can download the latest release from https://java.com. Users on the Windows and Mac OS X platforms can also use automatic updates to get the latest release.

Risk Matrix Content

Risk matrices list only security vulnerabilities that are newly addressed by the patches associated with this advisory. Risk matrices for previous security patches can be found in previous Critical Patch Update advisories and Alerts. An English text version of the risk matrices provided in this document is here.

Several vulnerabilities addressed in this Critical Patch Update affect multiple products. Each vulnerability is identified by a CVE# which is its unique identifier. A vulnerability that affects multiple products will appear with the same CVE# in all risk matrices. A CVE# shown in *italics* indicates that this vulnerability impacts a different product, but also has impact on the product where the italicized CVE# is listed.

Security vulnerabilities are scored using CVSS version 3.1 (see Oracle CVSS Scoring for an explanation of how Oracle applies CVSS version 3.1).

Oracle conducts an analysis of each security vulnerability addressed by a Critical Patch Update. Oracle does not disclose detailed information about this security analysis to customers, but the resulting Risk Matrix and associated documentation provide information about the type of vulnerability, the conditions required to exploit it, and the potential impact of a successful exploit. Oracle provides this information, in part, so that customers may conduct their own risk analysis based on the particulars of their product usage. For more information, see Oracle vulnerability disclosure policies.

Oracle lists updates that address vulnerabilities in third-party components that are not exploitable in the context of their inclusion in their respective Oracle product beneath the product's risk matrix.

The protocol in the risk matrix implies that all of its secure variants (if applicable) are affected as well. For example, if HTTP is listed as an affected protocol, it implies that HTTPS (if applicable) is also affected. The secure variant of a protocol is listed in the risk matrix only if it is the *only* variant affected, e.g. HTTPS will typically be listed for vulnerabilities in SSL and TLS.

Workarounds

Due to the threat posed by a successful attack, Oracle strongly recommends that customers apply Critical Patch Update security patches as soon as possible. Until you apply the Critical Patch Update patches, it may be possible to reduce the risk of successful attack by blocking network protocols required by an attack. For attacks that require certain privileges or access to certain packages, removing the privileges or the ability to access the packages from users that do not need the privileges may help reduce the risk of successful attack. Both approaches may break application functionality, so Oracle strongly recommends that customers test changes on non-production systems. Neither approach should be considered a long-term solution as neither corrects the underlying problem.

Skipped Critical Patch Updates

Oracle strongly recommends that customers apply security patches as soon as possible. For customers that have skipped one or more Critical Patch Updates and are concerned about products that do not have security patches announced in this Critical Patch Update, please review previous Critical Patch Update advisories to determine appropriate actions.

Critical Patch Update Supported Products and Versions

Patches released through the Critical Patch Update program are provided only for product versions that are covered under the Premier Support or Extended Support phases of the Lifetime Support Policy. Oracle recommends that customers plan product upgrades to ensure

that patches released through the Critical Patch Update program are available for the versions they are currently running.

Product releases that are not under Premier Support or Extended Support are not tested for the presence of vulnerabilities addressed by this Critical Patch Update. However, it is likely that earlier versions of affected releases are also affected by these vulnerabilities. As a result, Oracle recommends that customers upgrade to supported versions.

Database, Fusion Middleware, and Oracle Enterprise Manager products are patched in accordance with the Software Error Correction Support Policy explained in My Oracle Support Note 209768.1. Please review the Technical Support Policies for further guidelines regarding support policies and phases of support.

Security-In-Depth Contributors

Oracle acknowledges people who have contributed to our Security-In-Depth program (see FAQ). People are acknowledged for Security-In-Depth contributions if they provide information,

observations or suggestions pertaining to security vulnerability issues that result in significant modification of Oracle code or documentation in future releases, but are not of such a critical nature that they are distributed in Critical Patch Updates.

In this Critical Patch Update, Oracle recognizes the following for contributions to Oracle's Security-In-Depth program:

- Huixin Ma of Tencent.com [2 reports]
- Liying Wang
- Longofo of Knownsec 404 Team
- r00t4dm
- Robin Textor

On-Line Presence Security Contributors

Oracle acknowledges people who have contributed to our On-Line Presence Security program (see FAQ). People are acknowledged for contributions relating to Oracle's on-line presence if they provide information, observations or suggestions pertaining to security-related issues that result in significant modification to Oracle's on-line external-facing systems.

For this quarter, Oracle recognizes the following for contributions to Oracle's On-Line Presence Security program:

- Abderrahmane Elghoul
- Abilash V L
- Abisheik M
- Adam Willard
- Aleena Avarachan
- Ali Alzahrani

Critical Patch Update Schedule

Critical Patch Updates are released on the Tuesday closest to the 17th day of January, April, July and October. The next four dates are:

- 19 April 2022
- 19 July 2022
- 18 October 2022
- 17 January 2023

Modification History

Date	Note
2024-December-23	Rev 7. Corrected the CVE credits for WebLogic bugs
2022-March-14	Rev 6. Updated the version details and addtional CVEs (CVE-2022-23302, CVE-2022 23305 and CVE-2022-23307) for Oracle WebLogic Server
2022-Januray-31	Rev 5. Version details updated for Oracle HTTP Server and Oracle Business Activity Monitoring
2022-Januray-27	Rev 4. Retail matrix version changes and added credit for CVE-2022-21353
2022-Januray-24	Rev 3. CVSS update for CVE-2022-21392 and aded credit for CVE-2022-21346
2022-January-18	Rev 2. Updated Siebel Applications versions and added couple of credit names
2022-January-18	Rev 1. Initial Release

Oracle Database Products Risk Matrices

This Critical Patch Update contains 28 new security patches for Oracle Database Products divided as follows:

- 4 new security patches for Oracle Database Products
- 1 new security patch for Oracle Airlines Data Model
- 2 new security patches for Oracle Big Data Graph
- 1 new security patch for Oracle Communications Data Model
- 4 new security patches for Oracle Essbase

- 3 new security patches for Oracle GoldenGate
- 2 new security patches for Oracle Graph Server and Client
- 1 new security patch for Oracle NoSQL Database
- 2 new security patches for Oracle REST Data Services
- 2 new security patches for Oracle Secure Backup
- 1 new security patch for Oracle Spatial Studio
- 5 new security patches for Oracle TimesTen In-Memory Database

Oracle Database Server Risk Matrix

This Critical Patch Update contains 4 new security patches plus additional third party patches noted below for Oracle Database Products. None of these vulnerabilities may be remotely exploitable without authentication, i.e., none may be exploited over a network without requiring user credentials. None of these patches are applicable to client-only installations, i.e., installations that do not have the Oracle Database Server installed. The English text form of this Risk Matrix can be found here.

CVE#	Component	Package and/or Privilege Required	Protocol	Remote Exploit without Auth.?	CVSS VERSION 3.1 RISK				
					Base Score	Attack Vector	Attack Complex	Privs Req'd	
CVE-2021-37695	Oracle Application Express (CKEditor)	Valid User Account	HTTP	No	5.4	Network	Low	Low	F
CVE-2022-21393	Java VM	Create Procedure	Oracle Net	No	4.3	Network	Low	Low	
CVE-2021-32723	Oracle Application Express (Prism)	Valid User Account	HTTP	No	3.5	Network	Low	Low	F
CVE-2022-21247	Core RDBMS	Create Session, Execute Catalog Role	Oracle Net	No	2.7	Network	Low	High	

Additional CVEs addressed are:

- The patch for CVE-2021-37695 also addresses CVE-2021-32808 and CVE-2021-32809.

Additional patches are included in this Critical Patch Update for the following non-exploitable CVEs in this Oracle product family:

- Oracle Database Configuration Assistant (Apache Commons Compress): CVE-2021-36090, CVE-2021-35515, CVE-2021-35516 and CVE-2021-35517.
- Oracle Spatial and Graph (Apache Log4j): CVE-2021-45105.
- Trace file analyzer (Apache Log4j): CVE-2021-45105.
- Workload Manager (Guava): CVE-2020-8908.
- Workload Manager (Jetty): CVE-2021-28165, CVE-2021-28169 and CVE-2021-34428.

Oracle Airlines Data Model Risk Matrix

This Critical Patch Update contains 1 new security patch for Oracle Airlines Data Model. This vulnerability is remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

CVE#	Product	Component	Protocol	Remote Exploit without Auth.?	CVSS VERSION 3.1 RISK (se

CVE-2021-22901	Oracle Essbase	Build (cURL)	HTTPS	Yes	7.5	Network	Hig
CVE-2021-20718	Oracle Essbase	Infrastructure (mod_auth_openidc)	Multiple	Yes	7.5	Network	Lov

Additional CVEs addressed are:

- The patch for CVE-2021-22901 also addresses CVE-2021-22897 and CVE-2021-22898.
- The patch for CVE-2021-3711 also addresses CVE-2021-3712.

Additional patches are included in this Critical Patch Update for the following non-exploitable CVEs in this Oracle product family:

- Oracle Essbase
  - Infrastructure (Apache Commons Compress): CVE-2021-36090, CVE-2021-35515, CVE-2021-35516 and CVE-2021-35517.

Oracle GoldenGate Risk Matrix

This Critical Patch Update contains 3 new security patches for Oracle GoldenGate. All of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

CVE#	Product	Component	Protocol	Remote Exploit without Auth.?	CVSS VERSION 3.1 RIS

CVE-2018-1311	Oracle GoldenGate	Build Request (Apache Xerces-C++)	HTTP	Yes	8.1	Network	High	None

Oracle Graph Server and Client Risk Matrix

This Critical Patch Update contains 2 new security patches plus additional third party patches noted below for Oracle Graph Server and Client. Both of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

CVE#	Product	Component	Protocol	Remote Exploit without Auth.?	CVSS VERSION 3.1 R

CVE-2021-33037	Oracle Graph Server and Client	Packaging/Install (Apache Tomcat)	HTTP	Yes	5.3	Network	Low	None

Additional patches are included in this Critical Patch Update for the following non-exploitable CVEs in this Oracle product family:

- Oracle Graph Server and Client
  - Packaging/Install (Apache Commons IO): CVE-2021-29425.

Oracle NoSQL Database Risk Matrix

This Critical Patch Update contains 1 new security patch for Oracle NoSQL Database. This vulnerability is not remotely exploitable without authentication, i.e., may not be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

CVE#	Product	Component	Protocol	Remote Exploit without Auth.?	CVSS VERSION 3.1 RISI

CVE-2021-32014	Oracle REST Data Services	General (SheetJS)	Local Logon	No	3.3	Local	Low	None	Re

Additional CVEs addressed are:

- The patch for CVE-2021-28165 also addresses CVE-2021-28169 and CVE-2021-34428.
- The patch for CVE-2021-32014 also addresses CVE-2021-32012 and CVE-2021-32013.

Oracle Secure Backup Risk Matrix

This Critical Patch Update contains 2 new security patches for Oracle Secure Backup. Both of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

CVE-2021-29425	Oracle Commerce Guided Search	Content Acquisition System (Apache Commons IO)	HTTP	Yes	4.8	Network	High	None

Additional CVEs addressed are:

- The patch for CVE-2021-36090 also addresses CVE-2021-35515, CVE-2021-35516 and CVE-2021-35517.
- The patch for CVE-2021-37137 also addresses CVE-2021-37136.

Oracle Communications Applications Risk Matrix

This Critical Patch Update contains 33 new security patches for Oracle Communications Applications. 22 of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

- The patch for CVE-2021-42340 also addresses CVE-2021-33037.
- The patch for CVE-2021-44832 also addresses CVE-2021-45105.

Additional patches are included in this Critical Patch Update for the following non-exploitable CVEs in this Oracle product family:

- Oracle Communications Cloud Native Core Network Repository Function
  - NRF (Apache Commons Compress): CVE-2021-36090, CVE-2021-35515, CVE-2021-35516 and CVE-2021-35517.

Oracle Construction and Engineering Risk Matrix

This Critical Patch Update contains 22 new security patches for Oracle Construction and Engineering. 15 of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. Oracle E-Business Suite Risk Matrix

This Critical Patch Update contains 9 new security patches for Oracle E-Business Suite. 5 of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

Oracle E-Business Suite products include Oracle Database and Oracle Fusion Middleware components that are affected by the vulnerabilities listed in the Oracle Database and Oracle Fusion Middleware sections. The exposure of Oracle E-Business Suite products is dependent on the Oracle Database and Oracle Fusion Middleware versions being used. Oracle Database and Oracle Fusion Middleware security updates are not listed in the Oracle E-Business Suite risk matrix. However, since vulnerabilities affecting Oracle Database and Oracle Fusion Middleware versions may affect Oracle E-Business Suite products, Oracle recommends that

customers apply the January 2022 Critical Patch Update to the Oracle Database and Oracle Fusion Middleware components of Oracle E-Business Suite. For information on what patches need to be applied to your environments, refer to Oracle E-Business Suite Release 12 Critical Patch Update Knowledge Document (January 2022), My Oracle Support Note 2484000.1.

Additional CVEs addressed are:

- The patch for CVE-2020-6950 also addresses CVE-2019-17091.

Oracle Enterprise Manager Risk Matrix

This Critical Patch Update contains 7 new security patches for Oracle Enterprise Manager. 6 of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. None of these patches are applicable to client-only installations, i.e., installations that do not have Oracle Enterprise Manager installed. The English text form of this Risk Matrix can be found here.

Oracle Enterprise Manager products include Oracle Database and Oracle Fusion Middleware components that are affected by the vulnerabilities listed in the Oracle Database and Oracle Fusion Middleware sections. The exposure of Oracle Enterprise Manager products is dependent on the Oracle Database and Oracle Fusion Middleware versions being used. Oracle Database and Oracle Fusion Middleware security updates are not listed in the Oracle Enterprise Manager risk matrix. However, since vulnerabilities affecting Oracle Database and Oracle Fusion Middleware versions may affect Oracle Enterprise Manager products, Oracle recommends that customers apply the January 2022 Critical Patch Update to the Oracle Database and Oracle Fusion Middleware components of Enterprise Manager. - The patch for CVE-2021-41165 also addresses CVE-2021-41164.

Oracle Food and Beverage Applications Risk Matrix

This Critical Patch Update contains 1 new security patch for Oracle Food and Beverage Applications. This vulnerability is remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

Oracle Fusion Middleware Risk Matrix

This Critical Patch Update contains 39 new security patches for Oracle Fusion Middleware. 35 of these vulnerabilities may be remotely exploitable without authentication, i.e., may be exploited over a network without requiring user credentials. The English text form of this Risk Matrix can be found here.

Oracle Fusion Middleware products include Oracle Database components that are affected by the vulnerabilities listed in the Oracle Database section. The exposure of Oracle Fusion Middleware products is dependent on the Oracle Database version being used. Oracle Database security updates are not listed in the Oracle Fusion Middleware risk matrix. However, since vulnerabilities affecting Oracle Database versions may affect Oracle Fusion Middleware products, Oracle recommends that customers apply the Critical Patch Update January 2022 to the Oracle Database components of Oracle Fusion Middleware products. For information on what patches need to be applied to your environments, refer to Critical Patch Update January 2022 Patch Availability Document for Oracle Products, My Oracle Support Note 2817011.1.

Notes:

1. This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs.
