## Interactive Terminal Selection

### Abstract

OSSP iselect is an interactive line selection tool for textual files, operating via a full-screen Curses-based terminal session. It can be used either as an user interface frontend controlled by a scripting backend as its wrapper or in batch mode as a pipeline filter (usually between grep and the final executing command).

## Donation

OSSP iselect is a sub-project of OSSP and hence a fully non-profit **Open Source Software** effort. The development on OSSP **projects** like OSSP iselect is supported by the contributions and **sponsoring** of individuals and companies. You can support OSSP iselect and the other OSSP projects yourself by contributing source fixes and enhancements or by **donating** money. To reward the efforts on OSSP iselect, just press the button to the right to perform a secure **PayPal** online money transaction to the OSSP project. Credit will be given to you on the OSSP **Sponsors** page once your donation was received.
