[R1] Tenable.sc 5.17.0 Fixes Multiple Vulnerabilities

Medium

[← View more security advisories](#)

Synopsis

Tenable.sc leverages third-party software to help provide underlying functionality. Two separate third-party components (jQuery and OpenSSL) were found to contain vulnerabilities, and updated versions have been made available by the providers.

Out of caution and in line with good practice, Tenable opted to upgrade the bundled libraries to address the potential impact of these issues. Tenable.sc version 5.17.0 will update jQuery to 3.5.1 and OpenSSL to 1.1.1i to address the identified vulnerabilities.

Additionally, Tenable.sc 5.17.0 will also address an Access Control issue within the Automatic Distribution configuration. In certain scenarios, a scanner could potentially be used outside the user's defined scan zone for a scan without a particular zone being specified.

Solution

Tenable has released Tenable.sc 5.17.0 to address these issues. The installation files can be obtained from the Tenable Downloads Portal (<https://www.tenable.com/downloads/tenable-sc>).

This page contains information regarding security vulnerabilities that may impact Tenable's products. This may include issues specific to our software, or due to the use of third-party

Try

customers. Tenable believes in responding quickly to such reports, maintaining communication with researchers, and providing a solution in short order.
