[R1] Nessus Network Monitor 6.0.0 Fixes Multiple Third-party Vulnerabilities

Critical

← View more security advisories

Synopsis

Nessus Network Monitor leverages third-party software to help provide underlying functionality. One of the third-party components (OpenSSL) was found to contain vulnerabilities, and updated versions have been made available by the providers.

Out of caution and in line with best practice, Tenable opted to upgrade the bundled OpenSSL components to address the potential impact of these issues. Nessus Network Monitor 6.0.0 updates OpenSSL to version 1.1.1l to address the identified vulnerabilities.

Solution

Tenable has released Nessus Network Monitor 6.0.0 to address these issues. The installation files can be obtained from the Tenable Downloads Portal (<https://www.tenable.com/downloads/nessus-network-monitor>).

This page contains information regarding security vulnerabilities that may impact Tenable's products. This may include issues specific to our software, or due to the use of third-party libraries within our software. Tenable strongly encourages users to ensure that they upgrade or apply relevant patches in a timely manner.

Tenable takes product security very seriously. If you believe you have found a vulnerability in one of our products, we ask that you please work with us to quickly resolve it in order to protect
