[R1] Nessus Versions 8.15.4 and 10.1.2 Fix One Third-Party Vulnerability

High

← View more security advisories

Synopsis

Nessus leverages third-party software to help provide underlying functionality. One of the third-party components (OpenSSL) was found to contain vulnerabilities, and an updated version has been made available by the provider.

Out of caution and in line with best practice, Tenable has opted to upgrade OpenSSL to address the potential impact of the issue. Nessus 8.15.4 and Nessus 10.1.2 update OpenSSL to version 1.1.1n to address the identified vulnerability.

Solution

Tenable has released Nessus 8.15.4 and Nessus 10.1.2 to address these issues. The installation files can be obtained from the Tenable Downloads Portal (<https://www.tenable.com/downloads/nessus>).

This page contains information regarding security vulnerabilities that may impact Tenable's products. This may include issues specific to our software, or due to the use of third-party libraries within our software. Tenable strongly encourages users to ensure that they upgrade or apply relevant patches in a timely manner.

Tenable takes product security very seriously. If you believe you have found a vulnerability in one of our products, we ask that you please work with us to quickly resolve it in order to protect
